

Giant Killer
SERIES

AC Power Conditioner Kit Product Details

This DIY AC Power Conditioner Kit is part of Bruce Brisson's "Giant Killer" Series. These kits come with everything you need, including instruction sheet. It's the perfect solution for Home Theater!

The Solution to unwanted noise: Parallel AC filtering.

The Giant Killer AC Power Conditioner uses multiple patented parallel "AC Filterpoles"™; a tuned LCR technology. Filterpole technology eliminates reflections by efficiently absorbing all forms of AC noise from the mains, and then converting it into harmless thermal heat.

The result? Once this circuitry is working to clean, condition and protect your AV system, you will instantly enjoy "blacker" blacks, better color saturation, and increased shadow detail; movie sound tracks will deliver dialog, Foley sounds and background music with theater-like quality. Because your audio system now has a lowered noise floor, you will have pinpoint audio image placement within a lifelike soundstage, all with clear and authoritative bass. The Giant Killer power conditioner's circuitry is wired in parallel, so any component connected within 3 meters to the same AC line will receive its performance enhancements!

The Giant Killer AC Power Conditioner provides:

- Multiple, patented, parallel tuned filters operating over the widest frequency range, engineered to remove noise from your 50-60 Hz AC power line.
Unlike series filters, the Giant Killer will not limit dynamics.
- Elimination of common mode and differential mode noise.

For video: reduced noise results in improved black levels & color saturation, and improved overall realism and depth.

For audio: improved dimensionality, better detail and improved dynamic contrast.

- Does not inject noise like series filters will.
- Easy to assemble using just a screwdriver. Illustrated instructions included.

Giant Killer AC Power Conditioner
